

# The smd frequency inverter

Compact, powerful, without compromise – simply smart

**Lenze**

# smart micro drive | The compact smd for large tasks

2

**Do you work with digital and analog inputs, preset speeds or a display with a keypad in your applications? Are space in the control cabinet and budgets restricted? The smd frequency inverter provides advanced technology and high quality at a reasonable price – you will not be forced to compromise. The smd covers a power range from 0.25 ... 22 kW and features everything you would expect from a modern frequency inverter suitable for universal use. A relatively small number of functions can be used to provide complete yet simple solutions for a multiplicity of standard applications.**

Just three on-board functions and a handful of parameters are all you need – commissioning is child's play. Parameter settings can be saved on a unique chip. The electronic programmable module (EPM) is a plug-in memory chip which has been designed specifically for the smd. With the EPM, drive data only needs to be configured once and can then be transferred to other frequency inverters in the range. Even modifying drive parameters take just seconds – simply replace the EPM on the front panel of the frequency inverter.

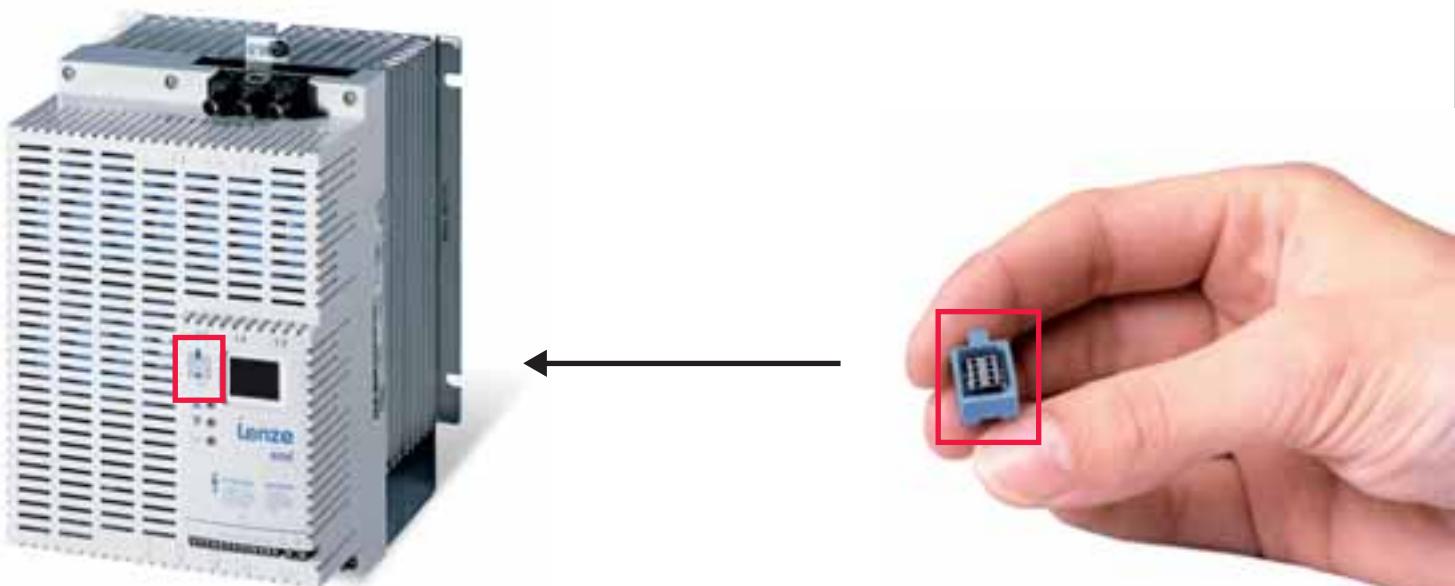

Programming takes place directly on the inverter or using a battery-powered EPM programming device. This means that configurations can be created or edited easily offline. The programmer can save up to 30 different drive programs as files. Copying from EPM to EPM, file to EPM or rewriting the EPM to a file takes just two seconds at the touch of a button.

The frequency inverter features integrated motor overload protection. For this purpose, a microprocessor calculates the motor load independently of the output speed, protects the motor and renders additional hardware superfluous.

The function and number of control terminals corresponds to the familiar Lenze standard:

- ▶ Start/stop functions
- ▶ Analog setpoint selection with voltage or current
- ▶ Freely programmable inputs
- ▶ Freely programmable relay output

The smd features current limitation with frequency reduction for stable operation, a highly visible LED display and the option of low-noise operation by means of an adjustable switching frequency up to 10 kHz.

<b>Installation height</b>	0 ... 4000 m amsl (with power derating of 5% per 1000 m above 1000 m amsl)		
<b>Ambient humidity</b>	< 95% (no condensation)		
<b>Vibration resistance</b>	Accelerational stability up to 0.7 g to EN 5178		
<b>Enclosure</b>	IP20 to EN 60529		
<b>Protection measures against</b>	▶ Short circuit    ▶ Overvoltage    ▶ Motor stalling ▶ Earth fault    ▶ Undervoltage    ▶ Motor overload		
<b>EMC</b>	Meets the requirements of EN 61800-3/A11		
<b>Noise emission</b>	Meets the requirements of limit class A to EN 55011 when installed in a control cabinet. Single-phase models without additional filters (integrated filter) Three-phase models with suitable footprint filter		
<b>Overload capacity</b>	150% rated current for 60 seconds		
<b>Switching frequencies</b>	4, 6, 8 and 10 kHz (current derating required at 10 kHz)		
<b>Output frequency</b>	0 ... 240 Hz		
<b>Conformity and approvals</b>	CE, UL, cUL		
<b>Digital inputs</b>	3 freely programmable, 1 "start/stop"		
<b>Analog setpoint</b>	Programmable, 0 ... 5 V, 0 ... 10 V (max. 20 mA); 0 ... 20 mA, 4 ... 20 mA		
<b>Relay output</b>	Freely programmable NO contact, 250 V AC, 3 A; 24 V DC, 2 A; 240 V DC, 0.22 A		
<b>Digital output</b>	1 freely programmable (max. 30 V, 50 mA), only on full I/O option		
<b>Analog output</b>	1 freely programmable (0 ... 10 V, max. 20 mA), only on full I/O option		
<b>Communication</b>	RS485 (Modbus and LECOM) only on full I/O option, CANopen		

# Accessories | Braking units, keypad and more

The following accessories are available for all Full I/O compact smd drives:

► **Braking units**

Compact modules comprising a brake chopper and integrated resistor

► **External keypad with IP65 enclosure** – for example for installation in a control cabinet door. The keypad features keys for the start/stop function, clockwise/counter-clockwise rotation, speed selection and an LED display.

► RFI filters designed as footprint filters to save space. RFI Filters are integrated as standard into the Basic I/O compact smd drive.

Delivered, installed, ready to go: The smd is now ready for operation and can meet your frequency inverter requirements for all basic applications. The clear concept and quick commissioning save both time and money.

*External keypad*

## EPM

EPM programming device with plug-in memory chip. Simply replace the chip in the frequency inverter and go on to a different drive task.

Accessories	
Designation	Type
EPM programming device	EEPROM1RA
External keypad	ESMD01KP
EPM memory chips	ESMDO1BP

# It's good to know | why we are there for you

*"Our customers come first. Customer satisfaction is what motivates us. By thinking in terms of how we can add value for our customers we can increase productivity through reliability."*

*"The world is our marketplace. We develop and manufacture internationally. Wherever you are in the world, we are nearby."*

*"We will provide you with exactly what you need – perfectly co-ordinated products and solutions with the right functions for your machines and installations. That is what we mean by 'quality'."*

*"Take advantage of our wealth of expertise. For more than 50 years we have been gathering experience in various fields and implementing it consistently and rigorously in our products, motion functions and preprepared solutions for industry."*

*"We identify with your targets and strive towards a long-term partnership which benefits both sides. Our competent support and consultation process means that we can provide you with tailor-made solutions. We are there for you and can offer assistance in all of the key processes."*

**You can rely on our service. Expert advice is available 24 hours a day, 365 days a year, in more than 30 countries via our international helpline: 008000 24 Hours (008000 2446877).**
